

ABOUT VYNL BIKES

Fast Bikes Since 2016

VYNL Bikes debuted in 2016 with the unconventional idea of offering simple aluminum race bikes that are made in the USA. Our first bike was a rim brake road model that proudly stuck it to technology hype. This is the bike we will always want to ride. We've since expanded our lineup, yet remain founded in our straightforward approach to making frames. VYNL bikes are constructed of hand selected 7005 aluminum tubing and are hand welded with careful, skilled manufacturing. Every VYNL frame has a heavy hit of race-inspired geometry and will leave you gasping "this thing is fast!"

Made in the USA

VYNL Bikes is a family-led team of racers, passionate riders, highly-skilled frame builders and custom frame painters. We are a small operation headquartered in Boulder, Colorado. We design and manufacture all of our frames in the USA with a focus on quality and straightforward technology. Most of all, we keep things fun and nimble, where designs can be imagined on a lunch ride and prototyped the next week.

Just Your Speed

With straight lines, clean details and compact proportions, our bikes are a nod to race machines yet are intended to be ridden like hell. We pour a ton of consideration into designing a well-balanced aluminum frame that is both lively and durable so there's no holding back on where you can take your VYNL. Your frame is designed by you from a selection of nearly 1000 hand painted color and decal combinations. The frame arrives directly to you, ready to be built just as you want.

Aluminum,
the Durable Upsetter.

7005
